

# Journal9

## URL

The URL for the source code of this project is available here: <https://github.com/ekivolowitz/LIS351Projects/tree/master/Journal9>

## Assignment Writeup

### Intentions

I've been doing some work with AWS, in particular hosting a static page through their Simple Storage Solution service (s3). I've created some scripts to automate the process of redeploying to the s3 bucket.

### Input Work Done

Shifted over aws commands from bash to python.

### Output Results

Generic script to upload to an s3 bucket of your choosing.

### Approach

I used argparse to get the directory that you'd like to sync, and then shifted my aws shell commands into python.

### Thoughts on the results

It made some work I had to do today easier, so I'm quite content with the output.

## Dependencies

- [python3](#)

## Usage

```
$ python3 Journal9.py directory/
```

## References

None
